

Seed production basis Natural characteristics

Our seed production basis is located in 1500 meters altitude. Long sunshine time and sufficient sunshine, annual sunshine hours are 3052.9 h. Great temperature difference between day and night, Dry climatic, Less pests and diseases condition. Annual average rainfall is 118.4mm, annual average temperature is 7.6°C. Excellent natural condition enable us to produce plump seeds with high germination rate. it is one of the best seed production region in the world.

Crown hybrid f1

Med-maturing variety. Vigor plant, uniform round fruit weighs about 8-10kgs. Rind is black and flesh is red, crisp, sweet & delicious. Firm rind, good for long distance shipment Suitable for different climatic condition cultivating.

Blacksun F1

Crown hybrid f1

Blacksun hybrid f1

Vigor plant, Med—maturity hybrid variety, harvesting 32 days after flowering. Round fruit with black skin, weighs about 8 kg.. Flesh is red, crisp & good taste. Tough rind is suitable for storage and long distant shipment. Good disease resistance.

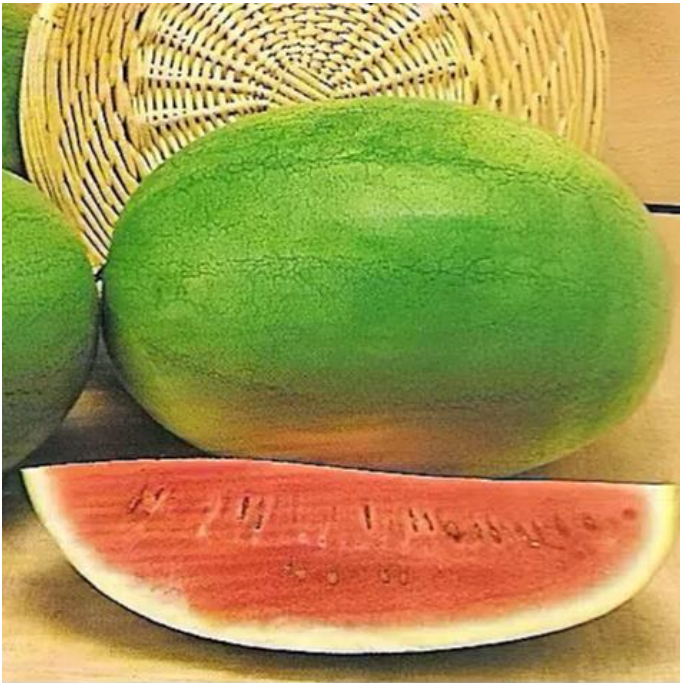

Super King hybrid f1

Med maturity, harvesting 30-35 days from flowering. black skin with wax powder. oblong fruit weigh 12-15kgs, red flesh, sweet and delicious. Disease tolerance.

Super Emperor hybrid f1

Mid-maturity variety. Fruits setting easily. Big oblong fruit weighs about 12—15kgs. Flesh is bright red, crisp & juicy. Good for storage and long distant shipment. Suitable for different climatic condition cultivating. Excellent variety.

Super Star hybrid f1

New release variety. Med-late maturity , harvesting 34 days from flowering. Uniform oblong fruits weigh about 12--15kgs, green skin with dark green nets. Flesh is red, crisp and juice. Good for fruits setting ability. Thin and rough skin is better for storage and long distance shipment. High yield, suitable for tropical & sub-tropical planting.

Stronger hybrid f1

Med-late maturity variety. Vigor plants. Big uniform oblong fruit weighs about 10kgs. Flesh is red, crisp & juicy. Green rind has dark green stripes. Good tolerant to disease. High yield.

Golden 863 f1

Med-late variety, harvesting 36-38 days from flowering, fruit setting easily. Oblong fruits weigh about 12-15kgs. Green skin with dark green stripes, red flesh and sweet. Disease tolerance, a wide adapted variety.

Sailor 01 hybrid f1

Med-late maturing variety, harvesting 100 days from sowing. Uniform oblong fruit, light green skin with green stripes, weighs about 8kgs. Red flesh, crisp and juicy. good for storage and shipments.

Sailor 02 hybrid f1

Med-late maturing variety, harvesting 105 days from sowing. Uniform oblong fruit, light green skin with grey green stripes, weighs about 8-10kgs. Red flesh, crisp and juicy. good for storage and shipments. suitable for humid region planting.

Sweet Wind hybrid f1

Med-late maturity variety. Vigor plants. Big uniform oblong fruit weighs about 6-8kgs. Flesh is yellow, crisp, juicy & delicious. Green rind has dark green nets. Good tolerant to disease. High yield.

AgroSun Co. Ltd.

Shiqiaozi Town, Benxi Liaoning, P.R. China

Kim hybrid f1

Stronger roots, fruits setting easily. Maturity is 95-100 days. Uniform fruits weigh about 2.5kgs. white skin in maturation has irregular nets. Thick flesh is light green, sweet and fragrance. Brix is 16%. suitable for open field and green house planting.

Field hybrid f1

Early maturity, round fruit with smooth white skin, weigh about 1.5-1.8kgs. white flesh, sweet and juice, content is abt.14-16%. Disease tolerance, good for marketing. Suitable for open field and green house planting.

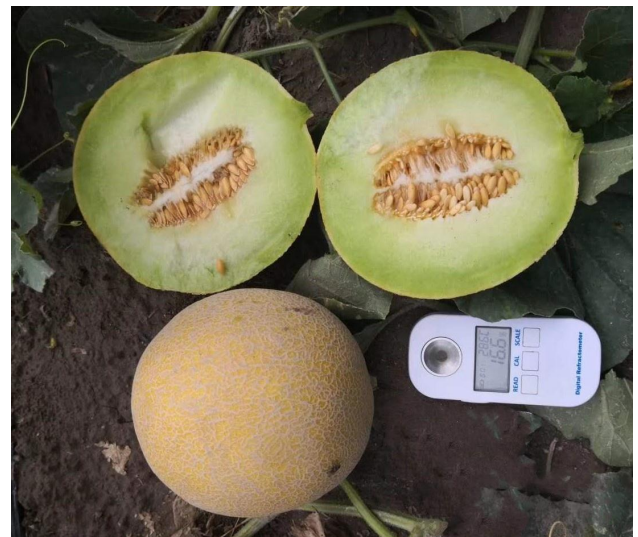

Yellow Dew hybrid f1

Stronger plants, maturity is about 35 days after flowering. High round fruits setting easily, yellow smooth skin, white flesh, sweet and juice, sugar contents 16-18%. fruit weighs about 2.5 kgs. Suitable for open field and green house planting.

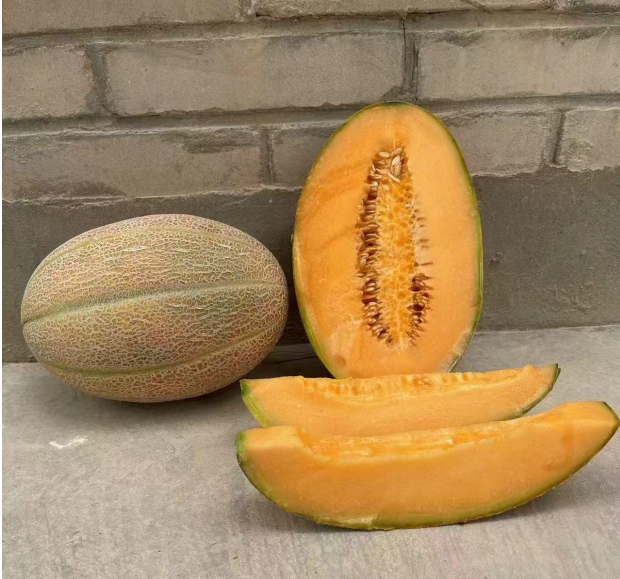

M 2813 hybrid f1

Fruit weight is about 2kgs, fruit color from green skin with netting to yellow netting during maturing. Maturity is 38-40 days from flowering. Soft flesh, light green. disease tolerance, high yield.

Emperor hybrid f1

Vigorous plants, good for fruits setting. Fruit weighs about 2.5kgs. Oblong fruit cover netting during maturing, has groove on the surface. Flesh is yellow color, crisp and delicious.

Green Bell hybrid f1

Vigorous plant. Round fruit, weighs abt. 1.5-2.0 kgs. light yellow fruits have nets in maturing. High yield. Suitable for green house and open field cultivation.

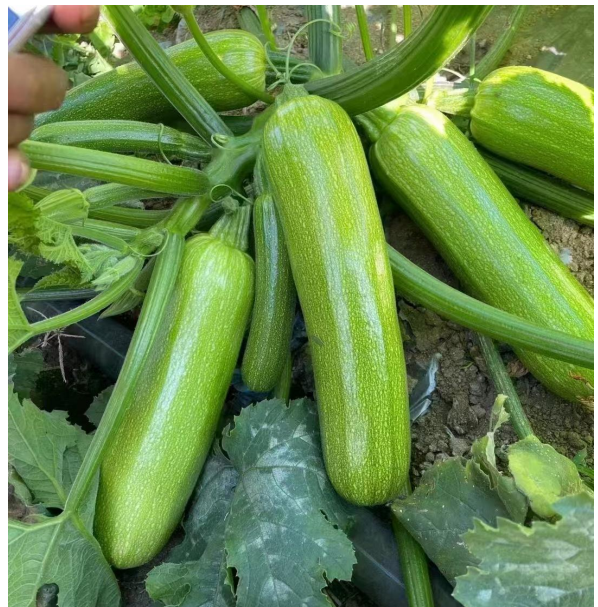

Alex hybrid f1

Early maturity, indeterminate hybrid type. Strong plant, upright single vine, node is short, continuous fruits setting easily, high yield. Fruits are emerald, columnar shape, 23cm in length and 7cm in diameter, smooth, straight. Flesh is compact, Strong adaptability. Tolerant to mosaic virus and powdery mildew.

Saint hybrid f1

Med-early maturity hybrid. root system is powerful, plants strong, cold resistance, continuous fruits setting ability excellent. Fruits expending fast and fruits harvesting period last long time. Fruit is about 23-25cm in length and 6-7cm in diameter, emerald green with lustre, long columnar shape, uniform. Heavy yield.

Summer star hybrid f1

Heat tolerance, vigor plants, suitable for summer growing. Light green fruit, about 24cm in length and 7cm in diameter. Heavy yield. Tolerant to mosaic virus.

Happy hybrid f1

Vigor plants, Light green fruit with dark green stripes. fruit is about 15cm in length and 5cm in diameter. good fruit setting ability, High yield.

Princess hybrid f1

Early maturity, hybrid globe shaped zucchini variety. Vigorous plant, short stem, good for continuous fruits setting ability. Light green globe fruit, 5cm in diameter, flesh is delicious. Suitable for green house and open field cultivation. High yield.

Green Bell hybrid f1

Mid-early maturity, short stem, vigorous plant. Dark green fruit, 5-8cm in diameter, good for fruit setting ability. High yield. Suitable for green house and open field cultivation.

Princess II hybrid f1

Early maturity, hybrid globe shaped variety. Vigorous plant, short stem, good for continuous fruits setting ability. Light green fruit, 5cm in diameter, flesh is delicious. Suitable for green house and open field cultivation. Good disease tolerance High yield.

Gold Bell hybrid f1

Mid-early maturity, short stem, suitable green house and open field cultivation. Globe fruit, 5—7cm in diameter, beautiful golden yellow skin, white flesh, delicious. Strong fruit setting ability.

PUMPKIN SEEDS

Red Pearl 05 hybrid f1

Long vine type. High round fruit weighs about 1.5kgs. pre-maturing stage with green stripes, and the green stripes will disappear during the maturing period. Quality fruits, delicious and sweet.

Autumn hybrid f1

Med-late maturity. first female flower bears on 15th-19th node. fruit is 14.5cm in length and 36cm in diameter, weigh about 3.0kgs. fruit is orange green skin, cover wax powder when maturation. flesh is thick, sweet and delicious.

Harvester 06 hybrid f1

Med-maturity, fruits weigh about 1.5 kgs. mature fruits is milky-yellow skin, fruit cavity is very small, high quality. Disease tolerance, high yield.

Harvester 10 hybrid f1

Med-late maturity, fruit weight is about 2kgs, maturing fruit is milky-yellow skin. fruits setting ability is very good, disease tolerance, high yield.

Sweet Dew hybrid f1

Med-late maturity, long stem, fruit weighs abt.2kgs, flat round, green color with white dottes. thick flesh, firm, sweet and glutin. Suitable for fresh and processing purpose.

Moonlight hybrid f1

Plants vines,harvesting 95 days after sowing,. first female flower set on the eighth to tenth node, fruits setting easily. Fruits are flat round,weigh 1.5-2kgs, fruit skin is white grey in maturing. Flesh thickness is 2-3cm, sweet and glutinous,delicious. Suitable for open field planting.

Baby hybrid f1

Vigorous plants, maturity is 30 days from flowering . fruits setting easily. shinning black skin , yellow flesh is thick , sweet and delicious. . fruit weighs about 0.5-0.7 kgs.

Baby Hybrid F1

Pioneer No. 2 hybrid f1

Beit Alpha female type. Vigro plants, good fruits setting ability. Fruit is 16 cm -18cm in length, flesh is crisp, high yield. Suitable for green house planting.

Pioneer No. 5 hybrid f1

Beit Alpha female type. Vigro plants, good fruits setting ability. Fruit is 18 cm -20cm in length, high yield. Suitable for green house planting.

Emerald hybrid f1

Vigorous plant, disease tolerance. Deep green fruit is about 15-17 cm in length and 5 cm in diameter. Fruits are smooth, uniform. Good production with vegetative growth habit and strong resistance to Powdery Mildew. Excellent fruit shape, suitable for green house growing.

Green Sword hybrid f1

Hybrid hot pepper. Med-early maturity, plants are strong, abundant branches, good fruits setting ability. Yellow green skin, 26 cm in length and 5 cm in diameter, 120-140g per fruit. Good disease resistance, high yield, suitable for green house and open field planting.

Red Coral hybrid f1

MedMed-early maturity, Vigor plants. Plants are about 90cm in height. Fruit are dark green, 14 cm in length and 2.0-2.5cm in diameter. abundant branches, high yield, tolerant to high temperature.

Island No.5 hybrid f1

Med-maturity, long shaped fruits. vigorous plant, disease resistance with high yields. Fruit is about 22-24cm in length and 1.4cm in diameter, weigh 20g. Uniform fruits with luster, young fruit is deep green and maturity fruit is bright red. Pungent fruits, good for storage and shipments. Suitable for fresh market and processing purpose.

Singer hybrid f1

Med Maturity. Wrinkled skin, pungency degree moderate, good taste. Fruit is 22-26 cm in length and 3.0cm in diameter, weighing about 70g per fruit. High fruits setting ability, heavy yield.

Island No.121 hybrid f1

Med-early maturity. Deep green fruit is pungent, smooth skin with luster. Fruit is 6-8cm in length and 4cm in diameter. Disease resistance, good for shipment.

D-Star hybrid f1

Early maturity, fruits setting easily, fruit is about 9-12cm in length and 1.2-1.5 weidth, dry fruit weigh about 2g, tolerant to Virus, Alternaria Leaf Spot and anthracnose. Hot and deep red, good for processing purpose. Dry fruit yield is about 7.5 tons/Ha.

Rio King hybrid f1

Determinated hybrid type, vigor plants, good for disease resistance. Med-late maturity. Red fruits are square round shape, weigh average 120gm, fruits are firm for shipments. Heavy yield available.

Rocky hybrid f1

Early maturity, determinated type. fruits are square round shape, red fruits are about 150g, suitable for open field growing. High yield can be obtained.

TO 71111 hybrid f1

Semi - Inderminated type. Ovel fruit weighs about 130-150g, disease tolerance, suitable for strage and shipments, long shelf life. Heavy yield.

TO 71111 F1

TO 7112 hybrid f1

Semi-Determinated type, Square round fruit weigh about 120-135 grammes . Disease tolerance, good for shipment. Suitable for open field planting.

Rio Grande Improved

Early maturity, hybrid globe shaped variety. Vigorous plant, short stem, good for continuous fruits setting ability. Light green fruit, 5cm in diameter, flesh is delicious. Suitable for green house and open field cultivation. Good disease tolerance High yield.

CARROT SEEDS

New Kuroda hybrid f1

Early Late maturing, harvesting in 100-110 days after sowing. Fleshy root is cylindrical shape, 20-25cm in length and 4-4.5cm in diameter, weighs about 250-350gm. Bright red and smooth skin, flesh is crisp, yellow core, Not easily cracked root.

Disease tolerant, suitable for fresh and processing purpose.

Red Jude

Early maturing, harvesting in 90 days after sowing. Fleshy root is cylindrical shape, straight, 20-24cm in length and 2-3cm in diameter, weigh about 200gm. Smooth red skin, core is thin. Suitable for commercial planting.

Lettuce Grand Rapid RPS

Rapid growth of scattered leaves type. Harvesting in 40 days after sowing. Not easy boltig, green leaves have wrinkles, good tasty, fibreless. Strong adaptability, high yield.

Pumpkin graftng stock

Warrior hybrid f1

Suitable for watermelon, melon and cucumber grafting. Developed root system, Strong tolerance to disease. Grafting survival rate is > 95%, grafting watermlon fruits yield could Increase more than 15%.
